### Message from the Guest Editors

Dear Colleagues,

Biopolymers have interesting physical and chemical properties, structures, and biological activity required to promote wound healing. In addition, they can be processed into a variety of shapes (i.e., films, fibers, gels, and particles). They are often associated with cells and/or therapeutic biomolecules to further improve wound healing. Moreover, the modification of biopolymers with different functional groups has led to the development of stimuli-responsive materials, in which it is possible to trigger the release of therapeutic molecules in biological environments with different characteristics. This Special Issue highlights some of the most promising approaches to biopolymer materials for wound healing applications. We invite articles on all aspects of research in this field, which may help to accelerate scientific knowledge and reach clinical applications.

## Message from the Editor-in-Chief

*Pharmaceutics* (ISSN 1999-4923) is an online open access journal on the science and technology of pharmaceutics and biopharmaceutics. The scientific community, the wider community and the general public have unlimited and free access to the content as soon as a paper is published; this open access to your research ensures your findings are shared with the widest possible audience. Please consider publishing your impressive work in this high quality journal. We would be pleased to welcome you as one of our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (Pharmaceutical Science)
