# Pharmacogenomics in Psychiatry

## Message from the Guest Editors

Pharmacogenomics has witnessed significant progress over the last years, further supporting the efforts for precision medicine. Particularly for psychiatry, which involves chronic and severely disabling diseases, this is the most crucial, as well as a challenging, target. Until now, there are very few studies highlighting the clinical implementation of pharmacogenomics in psychiatry. The articles that will be published should deal with, but may not be limited to, the following topics:

- Pharmacogenomics of antidepressants
- Pharmacogenomics of antipsychotics
- Pharmacogenomics of mood stabilizers
- Pharmacogenomics of adverse drug reactions in psychiatry
- Implementation of pharmacogenomics in clinical practice – attitudes, barriers, perspectives, costs
- Clinical decision support tools in pharmacogenomics with emphasis in psychiatry
