### Message from the Guest Editor

Dear Colleagues,

The advent of autonomous vehicles and the increased use of proximity sensors and other similar technologies has led to the remarkable growth of photonics technologies for these purposes. At the same time, new sensors and technologies have become available. Sensor-like event based sensors (EBS), neuromorphic cameras, along with the improvement of LIDAR and similar techniques, is providing the basis for the flourishing of these technologies, particularly in the automotive industry.

Dr. Sergio Restaino
