Message from the Guest Editors

Dear Colleagues,

Biomedical optics is a highly interdisciplinary field where physicists, chemists, biologists, physicians and engineers work together to develop optical principle and tools to solve the problems appearing in biology and medicine. The focus of this issue is to provide an interdisciplinary forum for state-of-the-art developments in both fundamental and technological biophotonics device including the recent progress and trends in advanced biomedical imaging, sensing, spectroscopy, diagnostics, therapeutics, and instrumentation as well as in the modern field of nano-imaging and nano-sensing.

Dr. Quero Giuseppe

Dr. Patrizio Vaiano

Dr. Pablo Zubiate
