Optical Systems for Astronomy

Guest Editors:

Dr. Eduard Muslimov

NOVA Optical IR Instrumentation Group, ASTRON, Oude Hoogeveensedijk 4, 7991 PD Dwingeloo, The Netherlands

Dr. Gennady G. Valyavin

Special Astrophysical Observatory, Russian Academy of Sciences, Nizhny Arkhyz, Russia

Deadline for manuscript submissions: closed (30 April 2024)

Message from the Guest Editors

In the domain of ground-based astronomy, we are approaching the commissioning of three extremely large telescopes and their first-light instruments, but we are also witnessing a number of small missions, which have become possible with new image sensors, robotic mounts and other technologies.

We are pleased to announce a Special Issue of *Photonics* on astronomical optics. Since the field is extremely diverse and continually growing, we propose a focus on optical systems developed for astronomy. In this Special Issue, original research articles and reviews are welcome. Relevant topics include (but are not limited to):

- Ground-based telescopes (including large segmented mirrors);
- Large- and medium-sized spaceborne telescopes and instruments;
- Small space instruments, including CubeSat-scale platforms;
- Spectral and spectropolarimetric instruments for astronomy;
- Integral field spectrometers;
- Adaptive and active optics;
- High-contrast imaging and coronagraphy;
- Wide-field instruments for all-sky surveys;
- Innovative optical elements for astronomy;
- Optical interferometric techniques and instrumentation.
