Deadline for manuscript
submissions:

31 July 2024

Message from the Guest Editors

The legume family is one of the largest and most diverse group of plants, and legume crops, including soybean, beans, and other pulses, are major sources of human food and animal feed with rich nutrition today. They have also played a key role in sustainable agriculture systems, with their biological nitrogen fixation function, since ancient times. Moreover, grain legumes were domesticated in parallel with cereals in several regions of the world and formed the economic basis of early farming cultures, and great diversity in some legume crops has been retained since their domestication. However, their adaptation roles and utilization potentials are not clear in the changing climate and soil microbial environment. On the other hand, a variety of pathogens and stress factors severely affect the growth and development of leguminous plants, thereby affecting yield and quality. Hence, this Special Issue of *Plants* will connect plant diversity and stress resistance with the fields of genetics and breeding to deepen the knowledge of plant adaptation to biotic and abiotic stress, and discover the genes that can improve host tolerance for breeding utilization.

Special Issue

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Dilantha Fernando
Department of Plant Science,
University of Manitoba, Winnipeg,
MB R3T 2N2, Canada

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
