Bioquímica i Ciències Naturals,  
Universitat Jaume I, Castelló de  
la Plana, Spain

**Dr. Héctor Candela**

Instituto de Bioingeniería,  
Universidad Miguel Hernandez  
de Elche, Elche, Spain

**Dr. Jose V. Die**

Department of Genetics,  
University of Cordoba, Campus  
de Rabanales, C-5, 14071  
Cordoba, Spain

Deadline for manuscript  
submissions:  
**closed (31 October 2021)**

### Message from the Guest Editors

Dear Colleagues,

The availability of optimized breeding methods (e.g., speed breeding) and affordable massively parallel sequencing technologies is enabling the rapid development of molecular toolkits for neglected cultivated plants, the so-called orphan crop species, which have only received minor attention in the past. The combination of high-throughput genomic approaches with advanced genetic analysis methods has paved the way to quickly identifying genetic variants underlying traits of agronomic interest in these species. Appropriate topics for this Special Issue might include the development and application of advanced genetic, genomic, and bioinformatic methods (e.g., de novo transcriptome or genome assemblies, mapping-by-sequencing, GWAS, speed breeding, and other related subjects), as well as studies of genes or gene families relevant to the domestication process and the development of agronomic traits in the species of interest. For this Special Issue, we welcome any original research or review articles that highlight recent advances in these areas.

## Message from the Editor-in-Chief

*Plants* is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
