## Wheat Breeding for Global Climate Change

Guest Editor:

**Dr. Koji Murai**

Department of Sustainable  
Agriculture, Fukui Prefectural  
University, Fukui 910-4103, Japan

Deadline for manuscript  
submissions:

**20 November 2024**

### Message from the Guest Editor

Global climate change is increasingly damaging agriculture. Wheat cultivation is no exception, and we must act quickly. The following events are becoming more common as causes and/or results of global climate change: elevated CO<sub>2</sub> concentrations (eCO<sub>2</sub>) and global warming; increased drought, heat, salinity, and abiotic (e.g., Fusarium) stresses, and so on. We must urgently develop wheat varieties that can overcome these difficulties. In this Special Issue, we will collect knowledge not only on breeding, but also on genetic resources, genetics, and agronomy to develop wheat (cereal) varieties that can withstand global climate change.

## Editor-in-Chief

**Prof. Dr. Dilantha Fernando**  
Department of Plant Science,  
University of Manitoba, Winnipeg,  
MB R3T 2N2, Canada

## Message from the Editor-in-Chief

*Plants* is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
