Message from the Guest Editors

Higher plants are sessile in their habitats; they adapt their growth and development according to the changing environment. In elucidating various stress responses at the molecular level, the organellar homeostasis is revealed to be essential for organismic survival under adverse conditions. Among these organelles, endoplasmic reticulum (ER) plays a crucial role in regulating secretory protein synthesis and maturation, while accumulating un-/mis-folded proteins overwhelm the ER folding capacity and therefore cause cellular dysfunction and death.

Previous studies on protein quality control in plant ER reveals a systemized transcriptional program to reduce translating mRNA and increase the protein folding capacity in model plants. Recently, the field of stress biology of plant ER has shifted its focus on to how does ER stress response function under non-stress conditions to support plant growth and how ER stress response restores ER homeostasis under ambient environments.

This Special Issue aims to gather recent advances in the understanding of molecular mechanisms to cope with the accumulation of unfolded/misfolded proteins inside of ER in plant cells.

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [PMC](#), [PubAg](#), [AGRIS](#), [CAPus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
