Deadline for manuscript
submissions:

31 December 2024

Message from the Guest Editors

Dear Colleagues,

The yield potential, production, and quality of oilseed crops (e.g., rapeseed, groundnut, castor, soybean, and sunflower) are potential objectives for breeders worldwide; however, oilseed crop production still faces numerous challenges, including the impacts of biologic and abiological factors in addition to the demand for improved yield and nutritional quality.

For the present, molecular genetics and breeding mainly include many biotechnologies, such as QTL, GWAS, MAS, map-based cloning, and gene or genome editing, which have been widely studied and achieved significant progress in plant science. As such, we develop this Special Issue, which will provide a forum with which to address these problems and present new progress in oilseed crop research.

Dr. Cunmin Qu

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
