Role of Auxin in Plant Growth and Development

Guest Editor:

Message from the Guest Editor

Prof. Dr. Tongda Xu

FAFU-UCR Joint Center for Horticultural Biology and Metabolomics, Institute of Science and Technology, Fujian Agriculture and Forestry University, Fuzhou, China

Auxin is considered one of the most important plant hormones and has attracted intense research interest in recent decades. Auxin metabolism and signal transduction are implicated in wide-ranging aspects of plant development and responses to environmental cues.

Deadline for manuscript submissions:

31 December 2024

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
