### Message from the Guest Editors

Biotic and abiotic stress factors affect plant metabolism in many ways, and their effects and consequences have been widely investigated in past decades. However, under natural circumstances, stress agents do not occur alone; rather, they exert their effects via complex and combined mechanisms. A considerable amount of data is available on stress-related plant responses, although there is a lot yet to be elucidated about the detection and alleviation possibilities, not to mention the underlying mechanisms. The focus of this Special Issue in *Plants* is on the possibilities to alleviate or putatively eliminate the detrimental effects of stress agents from the molecular to the ecophysiological level in order to successfully combat them in real life. Thus, submissions on all areas of plant sciences are welcome as long as the outcome of the research targets practical solutions of overcoming plant environmental stress factors.

Deadline for manuscript  
submissions:

**closed (10 April 2023)**

an Open Access Journal by MDPI

## Editor-in-Chief

**Prof. Dr. Dilantha Fernando**

## Message from the Editor-in-Chief

*Plants* is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
