Message from the Guest Editors

Many plants produce secondary metabolites that evolved along with the development of insects, and they have various defence functions against phytophagous insects. Many of these natural products are useful as insecticides or fungicides and as manipulators of insect behaviour. Furthermore, these compounds are known to be safe for the environment and human health. Secondary plant metabolites, especially essential oils or their individual components, could be a natural source for the design of biopesticides. On the other hand, biological interactions, such as those that occur between plants and microorganisms, are a source of new natural products that can be used for the control and management of insect pests. It is also important to be familiar with the regulation and legislation that may exist or arise as these new products are applied. Finally, it is important to consider economic aspects, such as the cost of production and storage, etc., which would arise from the use of these new botanical pesticides. Nowadays, essential oils already have an international market and cultivation areas.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Dilantha Fernando

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
