submissions:
closed (31 May 2023)

Message from the Guest Editors

The insect-borne plant diseases caused by viruses, fungi, bacteria, and phytoplasmas are ubiquitous in agroecosystems and are economically important in both agriculture and forestry. Many plant pathosystems consist of broad ecological communities modifying and/or influencing interactions including spread as well as host or vector manipulation to promote the transmission and genetic diversity of pathogens and disease severity. Despite the implementation of control strategies, many insect-borne disease epidemics still cause major economic losses and include outbreaks of *Xylella fastidiosa*, along with many viral, bacterial, and fungal diseases of annual and perennial crops, specifically transmitted by hemipteran insects.

The aim of this Special Issue is to collate the latest research findings on the interactions between host, pathogen, and vector; disease epidemiology; genetic diversity; as well as environmental and evolutionary factors involving an agroecological perspective of insect-borne diseases.

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
