Deadline for manuscript
submissions:

closed (30 November 2022)

Message from the Guest Editor

The natural products that make up specialized metabolites are widely distributed in the plant world. They play an important role in plant–environment interactions and have great phytochemical potential. This Special Issue focuses on the isolation and identification of plant components which are characteristic of specific plant species. Many plant taxa produce free volatile compounds, essential oils, glycosides, phenols, flavonoids, etc. The biological activity of identified compounds can be studied by observing individual components, classes of components, and/or whole isolates. The activity of extracts may include antioxidant, antiphytoviral, antibacterial, antiproliferative, or genotoxic effects, among others.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Plants is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
