Deadline for manuscript  
submissions:  
**closed (31 January 2021)**

### Message from the Guest Editor

Dear Colleagues,

Plant nutrition is frequently discussed topic, because it is difficult to find the equilibrium among the under- or overfertilizing of plants. One of the best sources of information about the relevance of fertilizing and about nutrient balance in agriculture gives us the results of long-term field experiments. Here, it is possible to evaluate plant nutrition from many points of view, e.g., organic and mineral fertilizing systems, soil tillage, weather changes, and varieties of plants. Based on the aforementioned facts, I would like to invite you to submit your manuscript in this Special Issue of *Plants*. The main topic of this Special Issue is nutrient cycling in long-term field experiments according to fertilizing systems, soil tillage, and weather conditions. Contributions including models allowing one to predict the behavior of soil and plant nutrients in the future are especially welcome.

## Message from the Editor-in-Chief

*Plants* is an open access journal which provides an advanced forum for research findings in areas related to plant function, its physiology, biology, taxonomy, stresses, and its interactions with other organisms. It publishes original research articles, reviews, reports, conference proceedings (peer reviewed full articles) and communications. In original research papers, it is important that full experimental details are provided. We also encourage timely reviews and commentaries on topics of interest to the plant research community.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, AGRIS, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Ecology, Evolution, Behavior and Systematics)
