Message from the Guest Editor

This Special Issue focuses on state-of-the-art research on conductive polymer (CP) composites and their applications. In addition to the intrinsic advantages of polymeric materials, such as their processability, light weight, and low cost, CPs can provide electrical conductivity after proper doping processes. Furthermore, the doping levels and oxidation states of CPs are reversible and tunable, which allow CPs to be distinguished from other organic semiconductors. Especially, CPs provide excellent compatibility with various other components, such as inorganics, metals, and carbon nanomaterials, resulting in unexpected synergistic effects from each component. Thus, CP composites have been widely utilized as electrode materials for solar cells, supercapacitors, chemical/biological sensors, thermoelectric (TE) devices, electromagnetic interference (EMI) shielding, anticorrosion coatings, organic transistors, and so forth. Considering the aforementioned trends, demands for CP composites are continuously growing. Accordingly, profound knowledge and deeper understanding of new technologies using CP composites are very important.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Alexander Böker

Lehrstuhl für Polymermaterialien
und Polymertechnologie,
University of Potsdam, 14476

Message from the Editor-in-Chief

Since its foundation in 2009, *Polymers* has developed into an internationally renowned, extremely successful open access journal. The editorial team and the editorial board dedicatedly combine open-access publishing and high-quality rigorous peer reviewing. The performance of the journal has proven this strategy to be well-suited and highly successful. This is reflected in the increasing impact factor of *Polymers*, the most recent one being 5.0.

I would like to invite you to contribute to the success of the journal by sending us your high quality research papers. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, FSTA, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q1 (Polymer Science) / CiteScore - Q1 (General Chemistry)
