Message from the Guest Editor

Dear Colleagues,

Protein–Protein Interactions (PPIs) as drug targets commonly refer to the surface of two interacting intracellular proteins or a complex of proteins that can potentially be disrupted or stabilized by proteins/peptides/antibodies that penetrate the cell. This is in contrast to proteins/peptides/antibodies—target proteins, whose activity can be measured in a biophysical, biochemical, or theoretical assay. Due to the growing interest in this field, this Special Issue aims to publish high-quality original research papers on the experimental and theoretical applications of Protein–Protein Interactions.

Message from the Editor-in-Chief

Since its foundation in 2009, *Polymers* has developed into an internationally renowned, extremely successful open access journal. The editorial team and the editorial board dedicatedly combine open-access publishing and high-quality rigorous peer reviewing. The performance of the journal has proven this strategy to be well-suited and highly successful. This is reflected in the increasing impact factor of *Polymers*, the most recent one being 5.0.

I would like to invite you to contribute to the success of the journal by sending us your high quality research papers. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, FSTA, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q1 (Polymer Science) / CiteScore - Q1 (General Chemistry)
