Message from the Guest Editor

Dear Colleagues,

Coordination polymers and metal-organic frameworks have attracted a lot of attention during the past 15 years of research. This is due to the fact that the combination of properties of organic ligands and metal ions allows to convey the final product properties, which would not exist in classical complexes or in each individual entity alone. Furthermore, the ability to tune the dimensionality of the final compound allows the control over materials' properties such as for example porosity or magnetism. From these properties derive a wide variety of applications, as for example gas storage or catalysis.

Message from the Editor-in-Chief

Since its foundation in 2009, *Polymers* has developed into an internationally renowned, extremely successful open access journal. The editorial team and the editorial board dedicatedly combine open-access publishing and high-quality rigorous peer reviewing. The performance of the journal has proven this strategy to be well-suited and highly successful. This is reflected in the increasing impact factor of *Polymers*, the most recent one being 5.0.

I would like to invite you to contribute to the success of the journal by sending us your high quality research papers. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, FSTA, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q1 (Polymer Science) / CiteScore - Q1 (General Chemistry)
