Message from the Guest Editors

Dear Colleagues,

Polymeric materials have a wide range of applications in the field of organic and perovskite solar cells, including polymer donors/acceptors, charge-transporting layers, interfacial materials, etc. The design strategies of the functional polymers are crucial for developing more efficient solar cells. Although these solar technologies are near commercialization, rational polymer design strategies are still desired to address the issues that impede the commercialization of organic/perovskite solar cells—stability issues in particular. This Special Issue aims to present the recent progress and fundamental aspects of polymer design strategies in organic and perovskite solar cells, and seeks contributions to assess the state-of-the-art and future developments in this field. The topics of interest for this Special Issue include but are not limited to the keywords listed below. Please do not hesitate to submit a paper whose topic is not explicitly mentioned in this list.

Message from the Editor-in-Chief

Since its foundation in 2009, *Polymers* has developed into an internationally renowned, extremely successful open access journal. The editorial team and the editorial board dedicatedly combine open-access publishing and high-quality rigorous peer reviewing. The performance of the journal has proven this strategy to be well-suited and highly successful. This is reflected in the increasing impact factor of *Polymers*, the most recent one being 5.0.

I would like to invite you to contribute to the success of the journal by sending us your high quality research papers. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, FSTA, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q1 (Polymer Science) / CiteScore - Q1 (General Chemistry)
