Message from the Guest Editors

Industrial wastewaters have more pollutants than other wastewater, such as municipal sewage. Thus, industrial wastewater treatment is more complicated. In industry, an oily water sewer flows into API separators, after which it is then sent to an equalization basin to mitigate variations in the concentrations of contaminants, such as organic pollutants and suspended solids, and to achieve a constant flow rate of the stream for the following facilities.

The total cost of a wastewater treatment plant varies based on the volume flow rate of wastewater and the contaminants that it has. Therefore, many parameters play roles in the removal of water contaminants in industry, and researchers can find the optimum and economic conditions for wastewater treatment in industries.

Special Issue

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and
Technology, University of Turin,
Via P. Giuria 9, 10125 Turin, Italy

Message from the Editor-in-Chief

Processes (ISSN 2227-9717) provides an advanced forum for process/system-related research in chemistry, biology, material, energy, environment, food, pharmaceutical, manufacturing and allied engineering fields. The journal publishes regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus**,
SCIE (Web of Science), **Ei Compendex**, **Inspec**, **AGRIS**, and **other databases**.

Journal Rank: JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
