Message from the Guest Editor

In response to global warming crisis, the growth in the popularity of electric vehicles (EVs) in the transportation sector has rapidly accelerated. Sustaining this rapid growth in the EV market necessitates the production of high-performance batteries at competitive prices. Recent advancements in battery technology involve the introduction of new chemistries and processes by cell manufacturers, aiming to supply consumers and automakers with superior performance cells.

This Special Issue titled "Facile and Scalable Approaches for the Improvement of Batteries" focuses on high-quality research contributions that highlight the latest innovations in battery processing. The objective is not limited to Li-ion batteries; rather, it aims to encompass research topics related to advanced and alternative battery technologies, with a particular focus on manufacturing processes and techniques. This Special Issue's topics include, but are not limited to, the following areas:

- Surface modification on cathode and anode material;
- Slurry coating and casting technology;
- Separator modification;
- Advanced pressing process;
- Advanced and alternative batteries.

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
