Deadline for manuscript submissions:
closed (15 October 2023)

Message from the Guest Editors

End-of-life tires are discarded on a daily basis, but even at present, limited action has been taken toward boosting their recyclability as most of the tires are either incinerated or landfilled/stockpiled. The complexity of tires has also been drastically increased, with little attention paid to designing them specifically for recycling. The retreading process is currently under intense development, and end-of-life tires have the ability to be retread several times. Furthermore, powdering the tires and separating the steel and textiles from this stream is a promising route that has found expanding applications. In terms of processability, devulcanization has received a lot of attention from the tire recycling industry, and numerous physical, chemical, and microbial processes and combinations are being developed to be industrialized.

Since applications of the recycled products (powder and devulcanized tire) are limited, tire pyrolysis has become extremely important. Process parameters and reactor design play a significant role in the degradation mechanisms and pyrolysis products, e.g., light olefins and dienes, naphthenes, mono-aromatics, tar, polar aromatics, and coke.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and
Technology, University of Turin,
Via P. Giuria 9, 10125 Turin, Italy

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
