Message from the Guest Editors

Wastewaters are generated from many different sources and represent thousands of tons of organic matter. Wastewater treatment is a biological process used to remove contaminants from wastewater or sewage and convert it into an effluent that can be returned to the water cycle with minimum impact on the environment, or directly reused. Microorganisms and their enzymes for waste, wastewater treatment, and bioremediation play an important role in these processes. Different microbial communities can consume various complex organic compounds and decompose them in their metabolism. Thus, the application of different groups of microorganisms and increasing their metabolic activity for detoxification of water from different pollutants, of both organic and non-organic nature, is a pressing problem at present.

The main goal of this Special Issue is to collect manuscripts focused on the microbial application in wastewater treatment, main chemical compounds present in wastewater, and their effect on microbial respiration activity of sewage sludge, aerobically degradation or utilized by a sewage sludge bacterial consortium.

an Open Access Journal by MDPI

Technology, University of Turin,
Via P. Giuria 9, 10125 Turin, Italy

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
