Message from the Guest Editors

Microwave heating exploits the interaction between electromagnetic waves and materials to convert microwave energy into heat. Microwaves are expected to become increasingly popular, with the development of new microwave technologies solving many problems in the future, particularly in energy-intensive industrial sectors, to replace conventional heating.

The industrialization of microwave heating depends heavily on the control of two main weak points of this technology, namely the presence of hot spots, and the risk of thermal runaway. Solving these problems creates the need for (i) a better understanding of the mechanisms of interaction between electromagnetic waves and the media under treatment; (ii) the development and manufacture of dedicated equipment; (iii) the study of the electromagnetic properties of new materials. The popularization of multi-physics simulation tools, progress in the development of microwave and radio frequency equipments, and the appearance of new materials all contribute to innovative solutions for microwave power applications at both the laboratory scale and industry scale.

an Open Access Journal by MDPI

Department of Drug Science and
Technology, University of Turin,
Via P. Giuria 9, 10125 Turin, Italy

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
