Message from the Guest Editors

This Special Issue is devoted to thermochemical conversion of various fuels (hard coal, lignite, biowaste, and waste) into power, heat, and valuable chemical products. While coal combustion and gasification are mature technologies, the application of other materials in these processes, including biomass and waste, is still subject to intensive research and development activities all over the world. Within the thematic area covered by this Special Issue, the thermochemical methods of waste biomass utilization are also considered, e.g., the technologies of thermal processing of waste water sludge, with particular attention given to the existing and future installations. The studies concerning the advancements in hydrogen-rich gas production in a gasification route the environmental aspects associated with this process, as well as the issues related to the potential recovery of valuable by-products, are also welcome.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Message from the Editor-in-Chief

Processes (ISSN 2227-9717) provides an advanced forum for process/system-related research in chemistry, biology, material, energy, environment, food, pharmaceutical, manufacturing and allied engineering fields. The journal publishes regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
