Message from the Guest Editor

Dear Colleagues,

Hydrogels, due to their high water content and structure close to living organisms, are used as versatile biomedical materials in industries and research. Recently, research on functionalization of the polymers and frameworks of hydrogels, as well as separation and material transportation utilizing their network structure, has been highlighted.

The objective of this Special Issue is to deepen our knowledge on hydrogels aimed at biomedical application from a broader perspective. From the design and synthesis of the structure polymers to the proposition, development, and elucidation of processes involved in a variety of phenomena that appertain hydrogels, such as gelation, functionalization, drug release, and separation, we extend our scope with the aim to introduce new knowledge on hydrogel to accelerate its application as well as to seek unprecedented potentials of hydrogels as a biomedical material.

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
