

Special Issue

Modelling, Optimization and Control of Nonlinear Processes

Message from the Guest Editors

In recent years, novel hybrid techniques involving first principles theory, empirical approaches, data-based regression and artificial- intelligence-based methods are being actively studied by researchers to handle the modelling of such nonlinear systems. Since the optimization and control of these nonlinear systems, in many cases, also depend on the accuracy of the models obtained, advanced research activities in these fields are also going through rapid development in research. This Special Issue aims to collect recent and high-quality research studies and review addressing these challenges. Topics include, but are not limited to, the following:

- The development of improved modelling and hybrid methods for nonlinear processes
- The development of advanced system identification and observers for nonlinear processes
- Optimization techniques for nonlinear processes
- The development of advanced control strategies for nonlinear processes
- Online validation for modelling and control techniques for nonlinear processes
- Review papers related to the above topics

Guest Editors

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto
Department of Drug Science and Technology, University of Turin, Via P.
Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

CiteScore - Q2 (Chemical Engineering (miscellaneous))
