Message from the Guest Editors

Hip and knee prostheses are incredibly effective procedures whose incidence rate has increased in the last few decades. Their effectiveness has also led to an expansion in the eligible population in terms of age and activity level.

Indeed, the field of joint prosthesis surgery is undergoing significant change, and the only way to stay up to date with developments is to collaborate with and understand what opinion leaders are thinking and how it affects their clinical practice.

This Special Issue is intended to investigate the state of the art in hip and knee replacement surgery, with the contributions from a significant number of excellent surgeons and other scientists.

This is a great opportunity to provide a guide for young surgeons and help them to have a general understanding of the greatest and most important issues in this field today.
