

Special Issue

The Elderly Patient: New Perspectives and Therapeutic Options in Clinical Dentistry

Message from the Guest Editors

In this Special Issue, we aim to provide a global overview of the new technologies, therapeutic approaches and advances relatively to the rehabilitation of elderly patients, underlining the aspects of all innovative solutions. Nowadays, the elderly individual is becoming the most common patient in clinical practice due to the increasing average life span. Furthermore, the current elderly patient usually has an active social life and also high expectations. However, sometimes they cannot afford some types of treatment because of their limited financial resources. Then, in this issue, we want to highlight the new different strategies of treatment for elderly patients in relation to these factors, providing new advances in the field of prosthesis. Keywords

- prosthesis
- elderly patient
- digital prosthetic planning
- treatment strategies
