### Message from the Guest Editor

Dear Colleagues,

In recent years, the possibilities for the application and development of sustainable materials from waste and renewable sources have begun to gain global recognition.

There has been a significant increase in research and interest in geopolymer materials (mostly those made of waste materials). The possible uses of sustainable material sources appear endless, and their application has been recognized in almost all technological fields.

The main purpose of this Special Issue is to publish innovative research and critical analyses related to various types of sustainable materials from waste and renewable sources, geopolymers and composites based on geopolymers or alkaline-activated materials. We encourage you to share innovative research in all areas related to sustainable materials from waste and renewable sources.

Dr. Dariusz Mierzwiński
