# **Remote Sensing of Surface BRDF and Albedo**

Guest Editors:

### Message from the Guest Editors

Surface albedo is a key parameter in the surface energy Dr. Alexander Kokhanovsky balance and has been identified as a primary essential **Dr. Xiaoning Zhang** climate variable (ECV) that can be used as a diagnostic tool for local climate change, land cover change, etc. The Prof. Dr. 7iti Jiao traditional estimation method of surface albedo usually relies on a bidirectional reflectance distribution function Dr. Hu Zhang (BRDF) reconstructed from multi-angular reflectance, and a Prof. Dr. Tao He direct estimation method based on prior information has also been developed and widely used. However, previous **Dr. Anxin Ding** studies mostly dealt with medium-resolution sensors that can capture multi-angular observations, and highresolution albedo estimation still meets the challenge of Deadline for manuscript lacking multi-angular measurements. This Special Issue submissions: aims to bring together research on remote sensing of 24 December 2024 surface BRDF albedo regarding algorithms, and measurements, simulations, variance analysis, and applications. Original research as well as review articles and short communications with a particular focus on remote sensing of BRDF and albedo of various surfaces including vegetation, soil, snow, ice and oceanic surface are welcome for submission

### Message from the Editor-in-Chief

*Remote Sensing* is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

## **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

**Journal Rank:** JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
