Satellite Remote Sensing of Atmospheric Composition and Monitoring Spatiotemporal Variabilities

Guest Editors:

Dr. Syuichi Itahashi
Sustainable System Research Laboratory (SSRL), Central Research Institute of Electric Power Industry (CRIEPI), Abiko 2701194, Japan

Dr. Pawan Gupta
Universities Space Research Association (USRA), National Aeronautics and Space Administration (NASA), Huntsville, AL 21046, USA

Dr. Prabir K. Patra
Department of Atmospheric Science, The University of Alabama in Huntsville, 320 Sparkman Dr., Huntsville, AL 35805, USA

Deadline for manuscript submissions:
closed (31 July 2022)

Message from the Guest Editors

Monitoring the change in the atmospheric composition at varying spatial and temporal scales using satellite retrievals is one of the keys to promoting our understanding of the Earth–Atmosphere system. Satellite data have been serving as important observational information to understand satellite behavior in the atmosphere, through the capturing of their emissions status and atmospheric fates. Based on the accumulation of the satellite dataset, a trend analysis of atmospheric composition can provide us with an idea of their variations over long-term periods. Additionally, satellite measurements can also help us to understand the short-term dramatic variations in atmospheric composition during specific events such as the economic recession and the restrictions of human activities during COVID-19.

This Special Issue is calling for scientific papers which contribute to understanding of the variations of atmospheric composition based on the satellite retrievals both for long- and short-term time periods. Contributions on the improvements on retrieval algorithms toward the precise monitoring of the atmospheric composition are also welcomed.

Editor-in-Chief

Dr. Prasad S. Thenkabail
Senior Scientist (ST), U. S. Geological Survey (USGS), USGS Western Geographic Science Center (WGSC), 2255, N. Gemini Dr., Flagstaff, AZ 86001, USA

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.
Journal Rank: JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
