

Current and Future Earth Observing Sensor Systems aboard the International Space Station (ISS)

Guest Editors:

Dr. Hirokazu Yamamoto

Dr. Kurtis Thome

Dr. Glynn Hulley

Dr. Hao Tang

Dr. Uta Heiden

Deadline for manuscript
submissions:

30 September 2024

Message from the Guest Editors

The International Space Station (ISS) is a unique platform with a human crew, which can contribute to Earth observations. Recently-launched sensors for Earth observation include ECOSTRESS, GEDI, OCO-3, DESIS, and HISUI that have all begun operations from ISS after 2018 with each sensor already providing useful information to understand planet Earth.

The current and future Earth observing sensor systems on the ISS have huge potential for research on the interactions among the geosphere, hydrosphere, atmosphere, and biosphere because their sensors can measure the Earth surface simultaneously. Data sharing obtained by Earth observing sensors onboard ISS can promote international collaboration under the international partnership.

This Special Issue invites manuscripts on research updates on the above instruments as well as other planned and previously-operated Earth observation sensors onboard the ISS. Topics can include but are not limited to descriptions of sensor calibration, validation of higher-level products, results from using multiple ISS sensors, and challenges and benefits of the ISS platform for Earth observation measurements.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank: JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
