

Mapping and Monitoring of Geohazards with Remote Sensing Technologies

Guest Editors:

Prof. Dr. Constantinos Loupasakis

Department of Geological Sciences, School of Mining and Metallurgical Engineering, The National Technical University of Athens (NTUA), Zografou Campus, GR-157 80 Athens, Greece

Dr. Ioannis Papoutsis

Institute of Astronomy, Astrophysics, Space Applications and Remote Sensing, National Observatory of Athens, GR-118 10 Athens, Greece

Prof. Dr. Konstantinos G. Nikolakopoulos

Applied Geology & Geophysics, Department of Geology, University of Patras, ZC 26504 Patras, Greece

Deadline for manuscript submissions:

closed (30 April 2023)

Message from the Guest Editors

Earth observation (EO) techniques have proven to be reliable and accurate for monitoring land surface deformations occurring naturally (landslides, earthquakes, and volcanoes) or due to anthropogenic activities (ground water overexploitation, extraction of oil and gas).

In cases where mitigation methods have to be put into practice, the detailed mapping, characterization, monitoring and simulation of the geocatastrophic phenomena have to precede their design and implementation. EO techniques possess high potential and suitability as alternative, cost-efficient methods for the management of geohazards, and have been proven to be a valuable tool for verifying and validating the spatial extent and the evolution of the deformations.

To this extent, in the current Special Issue, submissions are encouraged that cover innovative applications and case studies on the mapping and monitoring of all kinds of geohazards with remote sensing technologies. Submissions that make use of new tools and methodologies, including the use of data-driven machine learning methods, are encouraged.

Dr. Constantinos Loupasakis

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank: JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
