Novel Methods and Applications in Satellite and Aerial Imagery Time Series Analysis

Guest Editors:

Dr. Ionut Sandric

Geoinformation Applied in Environmental Studies, Faculty of Geography, University of Bucharest, Bdul. Nicolae Balcescu, No.1, Sect. 1., 010041 Bucharest, Romania

Dr. George P. Petropoulos

Department of Geography, Harokopio University of Athens, Eleftheriou Venizelou 70, 17676, Kallithea, Athens, Greece

Dr. Andrew Paylides

Geostatistics, School of Mineral Resources Engineering, Technical University of Crete, 73132 Chania, Greece

Deadline for manuscript submissions:

closed (1 January 2023)

Message from the Guest Editors

Understanding Earth's natural processes, especially in the context of global climate change, has been recognized globally as a very urgent and central research direction which needs further exploration. The recent launch of sophisticated satellite platforms with a high revisit time, combined with the increasing abilities for airborne platforms, which allow the collection of on-demand, ultrahigh spatial resolution aerial images, has created new opportunities for developing and applying new image-processing algorithms to solve old and new environmental issues.

The purpose of the proposed Special Issue is to gather scientific research related to this topic, aiming to highlight ongoing research and new applications in the field of satellite and aerial time-series imagery. The session's focus is on presenting studies aimed at the development or exploitation of novel satellite times-series processing algorithms, and applications for different types of Earth Observation data to investigate long-term processes in all branches of Earth (sea, ice, land, atmosphere).

Editor-in-Chief

Dr. Prasad S. Thenkabail

Senior Scientist (ST), U. S. Geological Survey (USGS), USGS Western Geographic Science Center (WGSC), 2255, N. Gemini Dr., Flagstaff, AZ 86001, USA

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend Remote Sensing for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank: JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
