Deadline for manuscript submissions:

**closed (31 August 2022)**

### Message from the Guest Editors

Dear Colleagues,

The Earth's coastlines have always been dynamic, but are especially so these days due to sea level rise and increased storm strength. Entire beaches and islands are being wiped out, disrupting entire communities. Since most of the world's population lives close to the sea, it is vital to constantly monitor the dynamics of coastlines. There are many ways of monitoring coasts using remote sensing techniques ranging from drones equipped with cameras to high altitude LiDAR aircraft to earth-looking remote sensing satellites. This Special Issue will focus on the latest satellite imagery and compare the imageries available from them for the application of coastal monitoring. There are new earth-looking remote sensing satellites such as Landsat 9, the latest Sentinel and PlanetScope, which are very promising potentially for coastal monitoring.

The Aim of this SI is to evaluate the newest series of earth looking optical and near-IR sensors onboard the latest satellites (Landsat 9, Sentinel 2A and Planet Scope, among other) for coastal geomorphological dynamics assessment.

## Message from the Editorial Board

*Remote Sensing* is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

**Journal Rank:** JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
