## Challenges and Perspectives of Remote Sensing Techniques for Water Resources Assessments and Solutions

Guest Editors:

**Dr. Andrea Scozzari**

Institute of Information Science and Technologies (CNR-ISTI), National Research Council, Via Moruzzi 1, 56124 Pisa, Italy

**Dr. Mariano Bresciani**

Institute for Electromagnetic Sensing of the Environment (CNR-IREA), National Research Council of Italy, Via Corti 12, 20133 Milan, Italy

**Prof. Dr. Abdelazim Negm**

Water and Water Structures Engineering Department, Faculty of Engineering, Zagazig University, Zagazig 44519, Egypt

Deadline for manuscript submissions:

**closed (30 June 2024)**

### Message from the Guest Editors

Today, water management decisions largely depend on instrumental observations, where remotely sensed information currently plays a major role. Given the inherent multidisciplinary characteristics of the water sector, we welcome contributions from both users of remote sensing products and developers of measurement methods, processing techniques and related field experiments. We welcome contributions about quantitative and qualitative observations of inland, coastal, and groundwater bodies, including the land-sea interface and coastal processes, with particular focus on all the aspects that support resource monitoring and decision-making.

Articles may address, but are not limited to, the following topics:

- Remote sensing of rivers, lakes and reservoirs
- Remote sensing in the coastal zone
- New generation of hyperspectral sensors
- Detection of shoreline changes
- Remote sensing of hydraulic infrastructures
- Agricultural water and land use
- Groundwater assessment and aquifer storage estimation
- Monitoring natural resources over time
- Assessment of water bodies sustainability and their bathymetry
- Remote sensing in coastal structures management

## Message from the Editor-in-Chief

*Remote Sensing* is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

**Journal Rank:** JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
