and Urban Planning, Arizona  
State University, Tempe, AZ  
85281, USA

**Dr. Qunshan Zhao**

Urban Big Data Centre, School of  
Social and Political Sciences,  
University of Glasgow, Glasgow,  
UK

Deadline for manuscript  
submissions:

**closed (31 October 2019)**

### Message from the Guest Editors

Remote Sensing offers an efficient method with which to monitor and observe the urban ecosystem and sustainable environment in a real-time and high-spatial-resolution manner. After more than 50 years of development, various remote sensing techniques (optical, thermal infrared, microwave (SAR/INSAR), light detection and ranging (LIDAR), and night lights) have been widely applied to understand the urban environment. We are requesting papers for a Special Issue of Remote Sensing on the remote sensing of urban ecology and sustainability. Specific topics include, but are not limited to

- The use of remote sensing to understand the ecological consequences of urbanization, such as biological invasion, habitat fragmentation, etc.
- The use of remote sensing to develop urban green infrastructure
- The exploration of urban heat island effects and ecosystem services using remote sensing
- Novel remote sensing application (new sensors, new methodology, etc.) in urban ecology and sustainability

We especially encourage submission with a combination of different methodologies (remote sensing, spatial analysis, urban climatology, etc.) to understand the overarching topic.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

*Remote Sensing* is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

**Journal Rank:** JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
