Dr. Gian Marco Marmoni

Department of Earth Sciences,
Sapienza University of Rome and
CERI—Research Centre for
Geological Risks, Piazzale Aldo
Moro 5, 00185 Rome, Italy

Prof. Dr. Salvatore Martino

Department of Earth Sciences,
Sapienza University of Rome and
CERI—Research Centre for
Geological Risks, Piazzale Aldo
Moro 5, 00185 Rome, Italy

Message from the Guest Editors

This Special Issue aims to focus on all the remote sensing applications that have enabled detection of irregularities over a large area of landslides, or other types of ground effects, induced by high-magnitude earthquakes that have occurred worldwide. Another topic of interest is linked to ground-effect scenarios induced by low-magnitude earthquakes, which can, however, give rise to outliers in expected spatial distribution, as the effect of the simultaneous action on the affected area of predisposing or preparatory factors, which can increase the areal proneness to ground instabilities.

We encourage the submission of research papers, reviews, technical notes and brief reports in which the remote sensing techniques have been employed to recent earthquakes and case histories of earthquake-induced landslides, the reconstructions of new inventories, the analysis of single cases or earthquake-induced scenarios at regional scales in remote/large areas.

Deadline for manuscript
submissions:

30 November 2024

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank: JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
