Message from the Guest Editor

Dear Colleagues,

Evaluating ecological patterns and processes is crucial for ecosystem conservation. In this view, remote sensing is a powerful tool for monitoring ecosystem status and change, involving several tasks like biodiversity estimate, landscape ecology, species distribution modeling.

The aim of this special issue is to publish straightforward research or review papers on the matter in order to stimulate further discussion on the potential of remote sensing in the ecological framework.

Dr. Duccio Rocchini

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank: JCR - Q1 (*Geosciences, Multidisciplinary*) / CiteScore - Q1 (*General Earth and Planetary Sciences*)
