

## Geostatistics and Spatial Data Mining for Ecological Climatology

Guest Editors:

**Dr. Mukunda Dev Behera**

**Prof. Dr. Jeganathan  
Chockalingam**

**Prof. Dr. Peter M. Atkinson**

**Dr. Shrutilipi Bhattacharjee**

Deadline for manuscript  
submissions:

**closed (19 January 2024)**

### Message from the Guest Editors

Scientists practicing ecological climatology now recognize that the patterns and processes of plant communities and ecosystems not only respond to weather, climate, and atmospheric compositions, but also feedback through a variety of physical, chemical, and biological processes to influence the atmosphere. The geoscientific understanding of planet Earth has given way to a new paradigm of biogeosciences. Geostatistical techniques have enabled geoscientists to commonly include spatial support and the principled handling of different spatial concepts.

With the emergence of the era of big data science, data availability from remote sensing platforms has been preferred over model-based approaches to handle big datasets. This drive toward data-oriented approaches, including spatial data mining and machine learning, has undoubtedly brought tremendous innovation in the field of ecological climatology as well.

The articles can related to, among others, climate change, global warming, ecosystem degradation, physiological response, ecosystem resilience, ecosystem services, lidar remote sensing, spatial data mining, machine learning, and big data analytics.

an Open Access Journal by MDPI

## Editors-in-Chief

### Dr. Prasad S. Thenkabail

Senior Scientist (ST), U. S.  
Geological Survey (USGS), USGS  
Western Geographic Science  
Center (WGSC), 2255, N. Gemini  
Dr., Flagstaff, AZ 86001, USA

### Prof. Dr. Dongdong Wang

Institute of Remote Sensing and  
Geographic Information Systems,  
Peking University, Beijing, China

## Message from the Editorial Board

*Remote Sensing* is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

**Journal Rank:** JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
