Message from the Guest Editors

Dear Colleagues,

The Amazon is the largest and most biodiverse continuous rainforest on the planet and provides substantial ecosystem services to the entire world. Thus, Amazon deforestation is a major environmental matter. About two-thirds of the Amazon are in Brazil, where the majority of Amazon deforestation has been happening. Despite this, 80% of Brazil's Amazon area remains forested, although the extent to which this remaining forest has been degraded remains an open question.

Thus, this Special Issue focuses on state-of-the-art remote sensing applied to Forest Dynamics and Degradation Monitoring in the Brazilian Amazon. Also, we are glad to receive works in Cerrado or Atlantic Forest in this subject. More detailed subjects can be found on the website. Other papers of relevance to understanding the dynamics and degradation status of Brazilian Amazon forests but which do not directly fit into the above categories are also welcome.

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank: JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
