Deadline for manuscript
submissions:

closed (15 February 2019)

Message from the Guest Editor

Dear Colleagues,

In the face of the emergence of Land Change Science (LCS), Geographical Information and Remote Sensing sciences have claimed a central role in observing, quantifying, and monitoring changes in land surfaces. In this Special Issue, recent advances in Remote Sensing and GISc that are related to LCS will be presented.

Land changes studied at a variety of scales, both in space and time, will be presented in an attempt to explore the role of analytical tools and technologies in understanding changing landscapes. Priorities include novel techniques for quantifying and analyzing land change with the use of old and new remote sensors. Combining geographical data from multiple spatial, spectral and thematic scales to quantify changes and their spatial patterns are also among priorities. Issues related to spatial error distribution as well as the detection of false changes through time are of particular interest.

Papers incorporating novel and interesting techniques to study land change, as well as some interesting applications, will be considered. Well-prepared review papers are also welcomed.

Dr. Sotirios Koukoulas

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank: JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
