Message from the Guest Editor

Dear Colleagues,

In recent years, the environment and especially water resources have been experiencing significant stress, resulting in water-related problems in many regions around the world. Surface and groundwater resources are continuously degraded as a result of agricultural activities, industrial wastes, as well as urban and touristic activities. In addition, climate change and the increasing rate of global warming, over the last few decades, has intensified the hydrological cycle, and increased the globally averaged precipitation, evapotranspiration, and runoff as an aftermath. Based on the above, there are geoinformatic techniques and other tools of high importance, through which hydrological processes can be simulated or predicted under different climate conditions and anthropogenic innervations. Apart from the above, this Special Issue highlights water-saving approaches in the agricultural sector, as well as investigates land use changes as an adaptation practice in water shortage rural areas.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Responsible prosperity is underpinned by sustained access to resources. *Resources*, publishes excellent science and scholarship which transforms understanding, practices and policies for conserving all natural resources—from water, land and air; to plant and animal biodiversity; to minerals and energy and their interconnection across scales. Significantly, we invite high quality submissions from natural and social sciences.

Build impact from your research by submitting to *Resources*, an open-access journal connecting you with data, insights, ideas and evidence needed to shape a better world.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), GeoRef, PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q2 (*Environmental Sciences*) / CiteScore - Q1 (Nature and Landscape Conservation)
