Message from the Guest Editor

Dear Colleagues,

Integrated water management has been widely recognized as a fundamental framework toward achieving water security through a whole-of-water-cycle approach. Looking through a wider lens beyond just water resources, this Issue seeks to investigate further into the inextricable and complex interactions between water-energy-land-food (WELF) resources in urban, rural and remote communities. We are interested in papers on the challenges associated with water-energy-food insecurity in remote, isolated and rural regions across the world. In these areas, ensuring a good quality and secure water, food and energy supply is more economically, environmentally and socially demanding, made all the more complex with impacts of climate change becoming increasingly apparent. Moreover, the WELF nexus cannot rely on "business as usual" management approaches, and examples of a systems approach accounting for the inherent inter-dependencies will be well received.

Message from the Editor-in-Chief

Responsible prosperity is underpinned by sustained access to resources. *Resources*, publishes excellent science and scholarship which transforms understanding, practices and policies for conserving all natural resources—from water, land and air; to plant and animal biodiversity; to minerals and energy and their interconnection across scales. Significantly, we invite high quality submissions from natural and social sciences.

Build impact from your research by submitting to *Resources*, an open-access journal connecting you with data, insights, ideas and evidence needed to shape a better world.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), GeoRef, PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q2 (*Environmental Sciences*) / CiteScore - Q1 (Nature and Landscape Conservation)
