Corporate governance research emphasizes the effect of board structure and composition, such as the size, independence, and expertise of directors, on corporate decision-making and performance.

Capital structure research includes considerations of tax implications, bankruptcy costs, agency problems, etc.

Risk research explores how firms manage financial risks, including interest rate risk, currency risk, and commodity price risk, which is crucial for understanding how these risks impact corporate performance.

Our Special Issue focuses on the critical intersection of financial risk management, corporate governance, and capital structure within the business landscape. It delves into the strategies and methodologies employed by organizations to identify, assess, and mitigate financial risks, especially in the context of shaping corporate governance practices and optimizing capital structures. We welcome your submissions on this topic!
