Management, Economics and  
Trade, Graduate School of  
Industrial Economics, Peter the  
Great St. Petersburg Polytechnic  
University, 195251 St. Petersburg,  
Russia

Deadline for manuscript  
submissions:

**closed (1 March 2023)**

### Message from the Guest Editor

The emergence of new technologies leads to structural changes in socioeconomic systems. These changes occur at regional, industrial, and business levels. At the regional level, these changes should be implemented by public authorities as part of the smart and sustainable development of territories. At the industrial level, these changes result in the development of Industry 4.0 in the form of new products, supply chains, business models, and technologies. Finally, at the business level, the emergence of these technologies leads to the transformation of business processes and the reshaping of their operations. All these changes lead to the emergence of new risks and requires the development of new methods for their assessment.

This Special Issue is open to all types of papers dedicated to risk analysis and management in the digital and innovation economy, but empirical works reflecting qualitative and quantitative or mixed decisions are especially welcome.
