Message from the Guest Editor

The regulatory Solvency II framework recently came in force in order to improve the solvency of the insurance sector and, by extension, underpin the stability of the broader financial system. As well-known, a risk-based system has been developed defining the criteria for computing the capital requirement by using either a standard formula or an internal model. Also diversification and risk-mitigation effects are taken into account. In this framework, actuarial literature and practitioners are focusing on both the assessment of capital requirement for different sources of risk and the valuation of asset and liabilities.

We welcome papers related, but not limited to, the following topics:

- Quantification of capital requirement for Life or Non-Life Underwriting Risk
- Extensions of Solvency II Standard formula.
- Assessing diversification
- Modelling risk-mitigation effects
- Capital allocation
- Valuation of technical liabilities in a Solvency II framework

Message from the Editor-in-Chief

Risks is published in Open Access format – research articles, reviews and other content are released on the internet immediately after acceptance. Specifically, *Risks* welcomes contributions that

- contribute with insight, outlook, understanding and overview, no matter how simple they are;
- show creativity in pedagogical tricks and techniques;
- help the transfer of theoretical research to public and private application;
- show responsibility for societal impact.

The scientific community and the general public have unlimited free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High visibility: indexed within **Scopus**, **ESCI (Web of Science)**, **EconLit**, **EconBiz**, **RePEc**, and **other databases**.

Journal Rank: CiteScore - Q1 (*Economics, Econometrics and Finance (miscellaneous)*)
