

# Special Issue

## Model Risk in Finance

### Message from the Guest Editor

Financial model risk analysis attacks a question that is both simple and complex: What happens if we use the wrong model or if use the model incorrectly? Paradoxically put, this is a question that we simultaneously both cannot answer and cannot not answer. This Special Issue aims to compile high quality papers that offer a discussion of the state-of-the-art or introduce new theoretical or practical developments in this area. We welcome papers related, but not limited to, the following topics: - Out-of-sample performance time- and product-wise of different models calibrated to the same instruments; it could be extensions of the analyses in for instance [Schoutens, Simons & Tistaert \(2004\)](#) and [Jessen, & Poulsen \(2013\)](#). - The effects uncertainty/ambiguity from both axiomatic and practical angles and for both derivative pricing (as for instance [Cont \(2007\)](#)) and optimal portfolio choice (as for instance in [Garlappi, Uppal & Wang \(2007\)](#)). - Regulatory aspects of model risk in light of [Federal Reserve Supervisory Letter SR 11-7](#) in which 'model' is used in a broader sense than is otherwise common among readers of this journal.

## About the Journal

### Message from the Editor-in-Chief

*Risks* is published in Open Access format – research articles, reviews and other content are released on the internet immediately after acceptance. Specifically, *Risks* welcomes contributions that

- contribute with insight, outlook, understanding and overview, no matter how simple they are;
- show creativity in pedagogical tricks and techniques;
- help the transfer of theoretical research to public and private application;
- show responsibility for societal impact.

The scientific community and the general public have unlimited free access to the content as soon as it is published.
